

SOLAR STIK®

Air Breeze Blue Blade Upgrade Kit

Item # 03-100011

Overview

The Air Breeze can be upgraded for nearly silent operation with the Blue Blade Upgrade Kit. The original Air Breeze Wind Turbine came with black, plastic, injection-molded blades, which generated power with some low to moderate noise and vibration, depending on wind speed. Replacing the Air Breeze's black blades with the new blue blades will not increase the power output of the Air Breeze, but the upgraded blades will provide quieter wind power generation.

The kit includes three (3) hand-laminated, carbon-fiber blades (the same blades used with the Air Silent X), a replacement hub that alters the pitch of the blade set, and a new nose cone.

Construction

Blades	Blue hand-laminated, carbon fiber
Blade Hub	Cast metal
Nose Cone	Injection-molded composite

Dimensions

Rotor Diameter	46 in (117 cm)
----------------	----------------

Includes

- (3) Blue, hand-laminated, carbon-fiber blades
- (1) Blade hub
- (1) Nose cone
- Installation hardware
